### Copyright and Permissions Statement

**Manuscript:** “UzABSA-LLM: Parameter-Efficient Fine-Tuning and Multi-Domain Annotation for Uzbek Aspect-Based Sentiment Analysis”

**Authors:** Sanatbek Matlatipov, Gusein Djalilov, Mersaid Aripov, and Jaloliddin Rajabov

On behalf of all co-authors, I provide the following statement regarding copyright and the use of third-party material in this submission.

**1. Licensing.** We agree that, upon acceptance, the article will be published open access under the Creative Commons Attribution 4.0 International (CC BY 4.0) license, with copyright retained by the authors. No funding or institutional condition requires an alternative license; the standard CC BY 4.0 terms are acceptable to all authors.

**2. Originality of figures and tables.** All four figures and all twelve tables are the authors’ own original work, created specifically for this study, and none reproduces previously published material. Every figure is drawn natively in L<sup>A</sup>T<sub>E</sub>X (TikZ/pgfplots) rather than imported as an image: Figure 1 is the ChatML instruction template composed by the authors; Figure 2 is a schematic of the authors’ annotation pipeline; Figure 3 plots training and evaluation dynamics directly from the authors’ own released trainer logs; and Figure 4 plots per-domain quality scores computed by the authors. The tables report statistics and results generated entirely by the authors. The manuscript contains no photographs, screenshots, or externally sourced graphics.

**3. Third-party material.** The manuscript reproduces no figures, schemes, tables, photographs, or substantial text extracts for which the authors do not hold copyright. Accordingly, no permission from any external copyright holder is required for publication.

**4. Source data.** The multi-domain review corpus was collected from the publicly accessible Uzbek business-review platform Sharh (<https://sharh.commeta.uz>), with the explicit permission of the data owner, Mr. Sardor Berdiyev, CEO and Co-founder of Commeta, as acknowledged in the manuscript. Documentary evidence of this permission can be provided on request. The derived annotated corpus is released under an open license on Zenodo (DOI: 10.5281/zenodo.22146677), and the UzABSA fine-tuning dataset is the authors’ own publicly released resource on Hugging Face.

**5. Declaration.** We confirm that, to the best of our knowledge, the manuscript contains no material that infringes the copyright or other rights of any third party, and that all necessary permissions for

the data used have been obtained.

Sincerely,

Sanatbek Matlatipov
